I thought it was ROMIR-1 and 145.55 up and down, I live in EM 26 and have never heard or been able to hit it either, for what it's worth
N50BC

If anyone knows where I could obtain high quality images from the NOAA and METEOSAT satellites (ie. ftp sites etc.), I would very much appreciate it if they could contact me at the email address below. We, as part of the United Nations GRID (Global Resource Information Database) organization are thinking about purchasing some kind of satellite receiver system and would like to do some research into which system to buy (which satellites to receive from).

To: ham-space@ucsd.edu

The Society of Amateur Radio Astronomers (SARA) now has a home page on the Web, with information about how to get started in amateur radio astronomy, where to get components and software, and an index of SARA Journal articles since 1983. The URL is:

<http://IRsociety.com/0c:/sara.htm|/>

(Note, because the Web server is DOS based, the URL ends in .htm|/ (where '|' is the vertical pipe symbol) rather than the standard .html/. Also, the '0c:' is the number zero, rather than the letter 'O' which has caused some confusion!)

The Society also operates a free BBS at (608) 835-9605.

SARA is an international non-profit organization with 325 members, and is open to all who are interested in amateur radio astronomy.

Best wishes,

Bob Lash & Mike Fremont

To: ham-space@ucsd.edu

If anyone from the St. Louis area has any information concerning local frequencies that carry the shuttle transmissions, I would really

appreciate knowing about it. Thanks in advance...
